

**Exploring the Trends and Transformations in the Modern Olympic Games  
(1896 – 2022)**

Matthew Martin

December 10, 2023

## Overview

The modern Olympic Games consist of Summer and Winter competitions that put the best athletes from all around the world against one another. I have always looked forward to the Olympics when they come around, especially the Winter games as I enjoy watching the ice hockey competition.

This report will utilize the “Olympic Summer & Winter Games, 1896-2022” dataset (<https://www.kaggle.com/datasets/piterfm/olympic-games-medals-19862018/>) from Kaggle. This dataset includes information about 74,000+ athletes, 162,000+ event results, and over 21,000 medal results dating back to the first modern Olympic games at Athens in 1896.

Throughout this report, I will be attempting to answer five major questions about the Olympics:

- Have any countries consistently performed well overall? In specific events?
- How have the Olympic events changed over time?
- Are any countries better at team events vs. solo events?
- Which athletes have won the most medals?
- Is there any evidence of host country advantage in the Olympics?

## Dataset Exploration

The main dataset that I used throughout this exploratory analysis was of results from the Olympic events. The dataset that I am working with includes information about the discipline (sport), event name, the Olympic games it was in, athlete name, representing country, and their

finishing position/medal for the event. With this data, I will be able to find valuable insights about the modern Olympic Games.

discipline_title	event_title	slug_game	participant_type	medal_type	athletes	rank_equal	rank_position	country_name	country_code	country_3_letter_code	athlete_url	athlete_full_name	value_unit	value_type

(Source: author)

The first insight that I was able to collect from the data was the number of Olympic Games that there have been. Since 1896, there have been 53 events. The first recorded event was at Athens, Greece in 1896, and the most recent at Beijing, China in 2022.

Due to the international nature of the Olympics, many countries, past and present, have competed in the games. 238 countries have competed in the Olympics since 1896. This includes former instances of modern countries, such as Czechoslovakia, which is now the Czech Republic, and the now-unified South Vietnam.

## Analysis and Insights

The Games of the I Olympiad that took place in 1896 are not the same Olympic games that we put on today. Throughout the years, there has been much development and evolution in the events, the international representation, and relevancy of the games. Up until 1924, the Olympics consisted of only the Summer Games. From 1924 until 1992, the Winter and Summer Games took place in the same year, amounting to great popularity and anticipation. In 1994, the schedule would change so that the Winter and Summer Games would alternate every two years, resulting in 4 years between each instance of the competition.

(Source: author)

There was a steady increase in the number of events, peaking in 1992 right before the decision to split the games. We can see that the Winter Games has significantly less events than the Summer Games. The Winter Games have around 100 events, while the Summer Games have had 300, peaking at 338 for the 2020 Tokyo Summer Games.

Fencing, swimming, and running events have been mainstays at every single Summer Olympic Games. Cross country skiing, figure skating, and ice hockey have been at every single Winter Olympic Games. In Appendix A, we can see a heatmap for the events that were performed at every Winter and Summer Olympics. Pictured below are the top 10 most prevalent events for all of the Olympic Games.

Athletics	1061
Swimming	586
Wrestling	428
Gymnastics Artistic	368
Shooting	286
Rowing	267
Boxing	265
Weightlifting	227
Fencing	223
Speed skating	205

(Source: author)

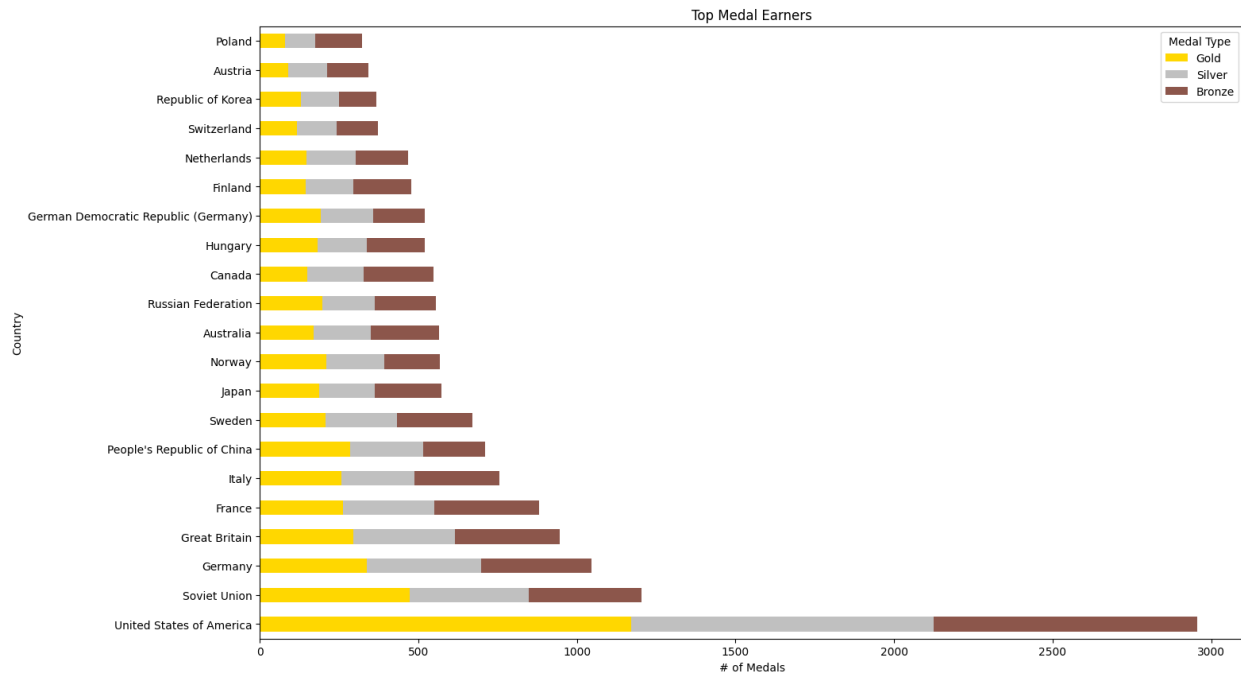

The “Athletics” event for the Summer Games encompasses running, jumping, throwing, and walking events. Given the high variance of these events, I decided to look deeper into the most common Athletics events.

Jumping (triple jump, high jump, long jump), running (hurdles, marathon, sprints) and throwing (shot put, discus) were the most common events, taking place at 28 out of the 32 total Summer Games.

Next, I decided to look into which countries have won the most medals. Surprisingly, I found that the United States has over double the number of medals as the next country, the former Soviet Union.

triple jump men	28
high jump men	28
long jump men	28
110m hurdles men	28
400m men	28
marathon men	28
shot put men	28
discus throw men	28
1500m men	28
pole vault men	28
100m men	28
800m men	28
200m men	27
hammer throw men	27
400m hurdles men	26
3000m steeplechase men	25
javelin throw men	25
10000m men	24
4x400m relay men	24
4x100m relay men	24
5000m men	24
decathlon men	24
high jump women	21
100m women	21
discus throw women	21

(Source: author)

(Source: author)

The dominance of the United States could be attributed to its great diversity, as well as the cultural importance that the Olympic Games have in the country. However, their abundance of medals does not amount to dominance in every event. I decided to take a look at the five most prevalent Olympic events, and see which countries had the most Gold medals in those events. All five graphs are located in Appendix B. The USA has far and away the most medals in Athletics, Swimming, and Shooting. Interestingly, the Soviet Union still leads in Gold medals for Wrestling and Artistic Gymnastics.

Next, I decided to see if any countries were more dominant in team events versus solo events.

Due to the nature of the events, there are typically more overall placements in solo events (up to 100+) than there are in team events (~30). The full page scatterplot is located in appendix C.

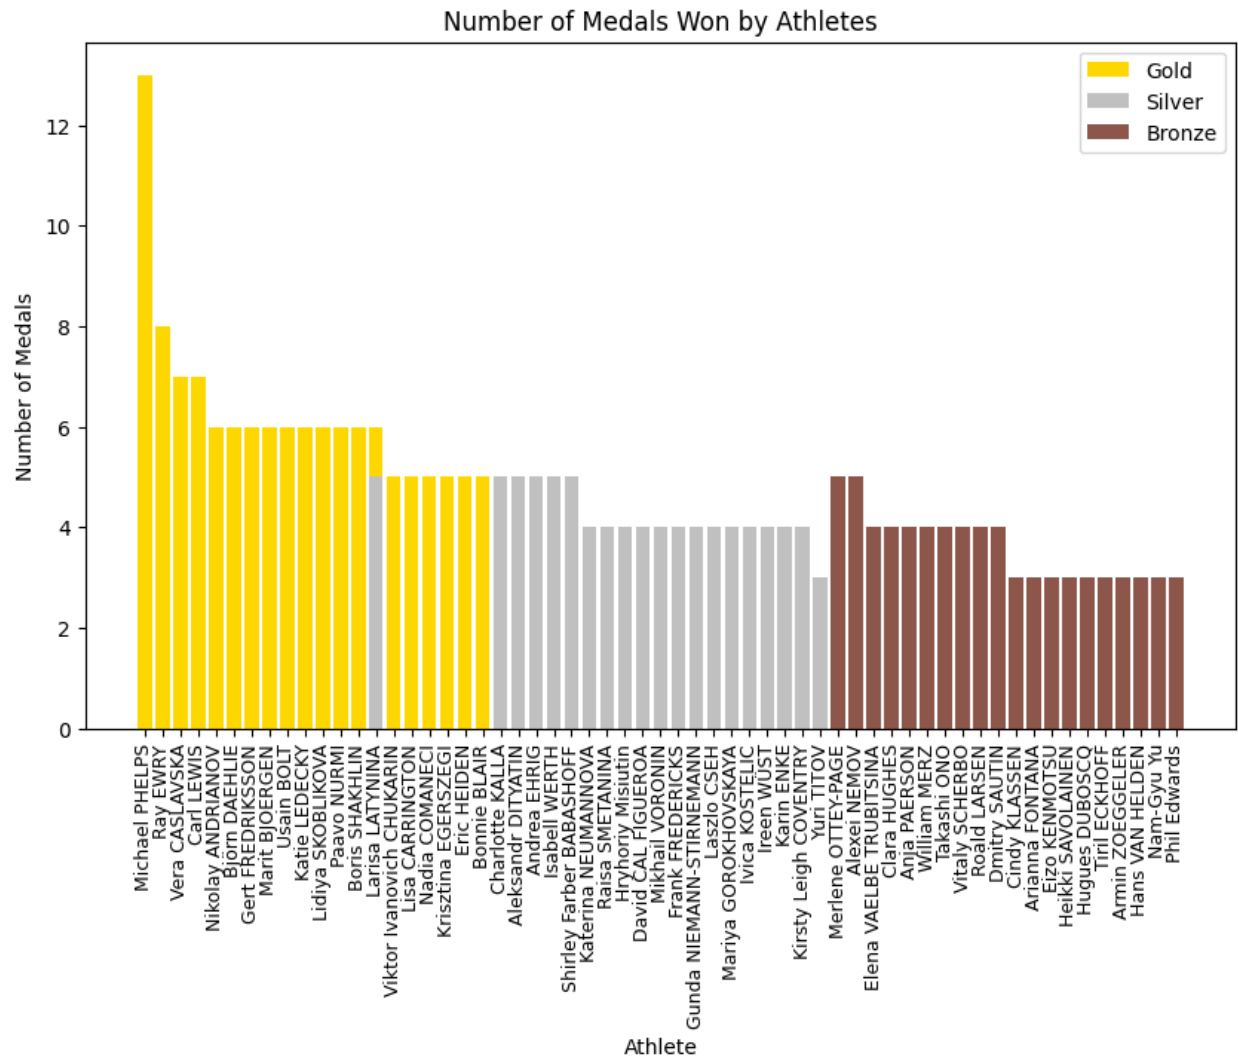

(Source: author)

Australasia, Haiti, German Democratic Republic, Soviet Union, and Rhodesia (located in modern-day Zimbabwe) are all countries that have low average placement in both solo and team events.

Another insight I gathered from the dataset is which athlete has won the most medals. I was able to gather the top twenty medal earners for each medal type.

(Source: author)

Michel Phelps far and away has the most gold medals, being listed with 13 in this dataset. Other notable medalists are Soviet-gymnast Larisa Latynina and Finnish-runner Paavo Nurmi.

The final research question I wanted to ask was if there was any evidence of the host country having an inherent advantage. I decided to find the number of medalists that were from the host country in each of the 53 Olympic Games.

(Source: author)

The 1900 Paris Summer Games and the 1936 Berlin Summer Games both had significantly more home born medal-earners than the other games. In the 1900 Games, there were 21 countries that won a medal, with France winning 103 of the 284 total. In the 1936 Games, there were 32 countries that won a medal, with Germany winning 89 of the 417 given out. With the increase in the competitors and events as the Olympics continue to develop, any host advantage that would be there seems to be negligible.

## **Conclusion**

It is evident that the Olympic Games have changed a lot over the years. From its origins in Athens, the Olympics have continued to be the leading example of athleticism and global competition. In this report, we have explored the top-performing countries, the events that have come and gone over time, the most-winning athletes, and the idea of a host country advantage. As the Olympic Games continue to evolve, I hope my analysis can serve as a foundational reference for understanding its historical context and competitive trends.
